

The SmartLogistics solution is an integrated web and mobile platform that supports pre-ordering, pre-payment and management of product stocks. The solution is aimed at ensuring seamless product ordering, payment & management of stocks by both suppliers and retailers, reducing on wastage caused by uncoordinated transport, product stock-outs, expired or dead stock.

The expected benefits of the solutions are:

Cost Management

Cost efficiency will be achieved through reduction of logistical overheads associated with transportation, storage of slow moving goods or expired products.

High Revenue

As a result of the pull system, both the distributor and the retailer will benefit from stocking Fast Moving Consumer Goods, which translates to more sales and more profit. Through elimination of stock-outs and dead/expired stock, more sales can be done.

Dashboard Reports

The solution provides a dashboard that gives an overall view of all transactions been carried out on the system.

Product Management

The SmartLogistics solution allows for product management, including pricing, which upon changing are reflected on the retailer application in real time

Financial Reporting

The solution has an aggregated financial management module that displays all the transactions on the platform, from the mobile payments, walk-in client payments and expenditures incurred by the business

Supplier Management

The SmartLogistics solutions allows the distributor to manage transactions with different product suppliers. The system can be configured to automatically notify the supplier once products reach their minimum re-order level

Competitive Intelligence

With a single repository database for client transaction management, data analysis can reveal trends that can be used to tweak and/or build customer centric products

Transaction Security

By integration of mobile payment system, physical cash transactions, which are risky, will be eliminated. Further, by use of a delivery token code during product delivery, losses and theft during transit will be eliminated

Client Management

The SmartLogistics solutions allow for the management of clients/retailers, their mode of payment and individual transactions.

Order Management

In addition to orders made through the mobile application, the platform allows for transactions for walk in clients to be captured

Purchase Management

Distributors can initiate purchase and management of stocks on the platform. This feature allows for seamless stock management between the suppliers or manufacturers and the distributors, as well as between the distributors & their retailers

Mobile Application

The Mobile Application allows the retailers to pre-order and pre-pay for products of interest. Upon delivery, the application generates a code which is shared with the delivery team as an acceptance token
